

MC 10 / MC 10 active / MC 20 active COIN COUNTING AND SORTING MACHINE

The MC series offers professional counting and sorting for up to 9 different denominations. Damaged, foreign and counterfeit coins are rejected automatically. A dialogue display cares for self-describing usage and the unique sorting technology of the MC 10 active guarantees a flexible and blockage-free use. With this "active" sorting technology more coin bins can be used for one denomination, two currencies can be sorted and even coin types with same size can be sorted. Moreover a control count without sorting is possible.

Systems - Flexible use due to different sorting technologies

- **MC 10:** Sorting thru sorting knives depending on the coin diameter for up to 9 denominations
- **MC 10 / 20 active:** Blockage free sorting thru solenoids
- More coin bins per denomination usable
- Control count without sorting
- Sorting of coins with same diameters and special coins
- Optionally two currencies - up to 8 denominations each/
 Indication of currency sub totals and grand total.

Handling - easy and clear

- Lightened, alphanumeric 4-line display
- Clearly arranged keyboard with direct selection buttons for the most important functions
- One total and up to nine independent cashier memories
- Batch function with two freely programmable batch levels for the use of different coin bins (standard drawers, bags or tubes) - configurable in weight or number of coins

Triple coin sensor - latest generation!

- Magnetic based alloy sensor in high end quality
- Capacitive sensor for the evaluation of the coin surface
- Optical precision sensor for special requests (optional)
- Optical elements in „High Power“ style

General information and options

- Counting speed up to 900 coins / minute
- Battery buffer for memory and results
- Optional bagging attachment for coin bags and tubes
- Serial port for external printer or PC connection (online integration, MC Service software)
